Reasons For Allowance

None of the references disclose alone or in combination a fiber optic gyroscope comprising a light source, a fiber coupler, an integrated circuit having a function of a polarizer and branching optical waveguide and a fiber optic coil and detecting an angular velocity applied to the fiber optic coil about the axis thereof, a polarization maintaining optical fiber having its length L is connected to an input/output end of the optical integrated circuit nearer the light source in an optical system of the optical fiber from the light source to the optical integrated optical circuit. The polarization maintaining optical fiber of its length L resulting in a difference in group delay time between the orthogonal two polarization modes and the difference at least exceeding a coherence length of light from the light source and the polarization maintaining optical fiber is formed by a single mode optical fiber and the fiber optic is formed by a single mode optical fiber.
